

[Full Name]

Senior AI Systems Architect | Infrastructure & Security Specialist [Email] | [Phone] | [LinkedIn URL] | [Portfolio/GitHub]

Professional Summary

Visionary AI Systems Architect with extensive experience in designing and securing complex, hybrid cloud-local setups. Proven track record in orchestrating multi-agent systems ("Council Mode"), integrating enterprise-grade home automation, and optimizing cost-efficiency through hybrid inference strategies (GCP + Local LLMs). Expert in network security, system resilience, and unified platform engineering.

Technical Skills

- **Architecture:** Multi-Agent Systems, Hybrid Cloud (GCP/AWS), Microservices, Unified System Design.
- **AI & LLM:** LLM Orchestration, RAG Pipelines, Prompt Engineering, Ollama, Google Gemini API, OpenAI API.
- **Infrastructure & DevOps:** Proxmox VE, Docker/Podman, Linux Administration (Ubuntu/Debian), CI/CD, Systemd services.
- **Networking & Security:** Tailscale Mesh Networks, Reverse Proxies (Caddy/Nginx), OAuth2 Implementation, SSH Tunneling, Network Hardening.
- **Languages & Tools:** Python, Bash, YAML, JSON, Git.

Key Projects & Experience

Unified AI System Architecture | *Chief Architect*

Designed and implemented a comprehensive "Unified System" integrating home automation, personal AI assistants, and cloud infrastructure.

- **"Council Mode" Orchestration:** Architected a multi-agent decision-making system where specialized AI agents (Claude, Gemini, GPT-4) collaborate to provide high-accuracy responses and execute complex tasks.
- **Hybrid Inference Engine:** Engineered a cost-optimized gateway balancing load between local open-source models (Ollama on verified hardware) and cloud APIs (Google Gemini, OpenAI), reducing operational costs while maintaining high availability.
- **High-Availability Infrastructure:** Deployed a resilient Proxmox-based virtualization cluster hosting crucial services including Home Assistant, AI Gateways, and Monitoring stacks.
- **Security First Approach:** Implemented a "Ring of Resilience" utilizing Tailscale for secure remote access, strict OAuth2 authentication flows for mail integration, and granular SSH access controls.
- **Advanced Monitoring:** Integrated Google Cloud Monitoring with local metrics collectors to visualize system health, billing costs, and resource usage in real-time.

Home Automation Ecosystem | *Lead Engineer*

- **Complex Integration:** Bridged diverse protocols (Zigbee, WiFi, Bluetooth) into a centralized Home Assistant controller, resolving critical connectivity issues with Docker and D-Bus.
- **Voice Control Systems:** Integrated Yandex Alice and local voice assistants for seamless natural language control of IoT devices.
- **Remote Desktop Infrastructure:** Configured high-performance remote access solutions (Moonlight/Sunshine) for gaming and heavy compute tasks across the network.

Languages

- **English:** Professional Proficiency
- **Hebrew:** Professional Proficiency
- **Russian:** Native
